

KALEIDOSCOPE (TABLE MODEL) No. 1750

INSTRUCTIONS FOR USE.

Set up the Kaleidoscope as shown on the box and sprinkle some of the coloured fragments on to the revolving table. Look through the aperture at the top of the tube—a brilliant design will then be seen. Countless changing designs of incredible beauty and colouring are created by slowly rotating the table or by slightly tilting the tube. A further limitless number of variations can be obtained by occasionally moving the coloured fragments on the table.

Surprising results can be obtained by the substitution in place of the coloured pieces, of such commonplace articles as matchsticks, buttons, small screws and nails, pieces of coloured cotton and wool and so on.

This Kaleidoscope is one of the wide range of S.E.L. precision quality products, full details of which may be obtained from your nearest dealer or stockist or by writing direct to us.
